Viaduct™ now supports iPhone®

The next generation interoperability platform provides remote support from PDAs

BOSTON, MA & BRACKNELL, ENGLAND – WEDNESDAY, May 27, 2009 – BridgeForward Software, a leading provider of application integration technology, today announced that its next generation interoperability platform, Viaduct™ now provides remote support of live interfaces directly from a PDA.

Using an iPhone®, BlackBerry®, or other PDA, a user can securely connect to a live Viaduct interface and diagnose any problems **from wherever you are**.

"Virtually every support manager or IT staffer has been in an offsite meeting when they get an urgent message from a customer – 'the interface is down,'" stated Kevin O'Brien, BridgeForward's senior vice president.

"The support manager has to get back to his/her PC, log into the integration application, securely connect to the customer's site and then analyze what has gone wrong. Time consuming and inefficient. But not anymore. With Viaduct™, remote monitoring can now be done immediately and efficiently from any location using a PDA," added O'Brien.

The user interface is specifically designed for the different types of PDA s in use and allows the user to analyze performance, monitor connections, identify problems, start and stop connectors and much more.

Viaduct™ is a service oriented, enterprise integration design studio and runtime environment that runs on any platform and any device. Viaduct enables Enterprise Application Integration (EAI) and facilitates an SOA by exposing legacy systems as reusable services.

Viaduct™ provides a graphical approach to solving complex integration problems. It is the first integration solution that allows the business analyst and developer to use an integration-specific workflow process to design, test and deploy interfaces. Users can design, build and deploy complex integration processes the same way they would draw them on a whiteboard.

Applications can be integrated together in and across enterprises. Business agility can be improved by quickly enabling and supporting changes in business practices by enabling new interactions between systems.

In addition to PDA support, Viaduct also provides benefits over traditional interface solutions:

- SOA-enable legacy applications
- Visual process design for workflow
- Operating system independence
- Web-based monitoring tools

About BridgeForward Software

BridgeForward Software is an international technology and services company focused on solving data integration and data migration challenges within the healthcare industry. BridgeForward solutions are deployed in more than 4,500 hospitals, physician offices and clinics worldwide. BridgeForward has customers throughout North America, the UK, Europe and Asia and maintains offices in Boston, MA and London, England. For more information, please visit:
